**Performance measured with flooded inlet (0 PSI), 70°F (21°C) ambient and water temperature, and voltage controlled at 230 VAC, 60 Hz. Positive inlet pressure will increase the discharge pressure by a similar amount, for a given flow. Maximum inlet pressure is 60 PSI.**

**Shaded area denotes continuous operation capability at designated pressure and current.**

### HEAT RISE

All of the pump models in the Performance Data and Heat Rise charts are in the shaded area, meaning they are capable of sustaining continual running, at any of the above listed pressures, without shutting down to allow the motor to cool. To conserve wearing parts, however, the pump should only operate as needed.

**All performance and heat rise figures are approximate. Actual values will vary with ambient conditions.**
